Pressure Sensor/Switch

The externally controlled valve is pneumatically operated. It consists of a diaphragm actuator and a 2-way valve body. The diaphragm actuator moves a spindle with valve disc against a spring and switches the valve. The spindle is designed glandless with double seal. The actuator body is made out of epoxy resin.

Circuit function A

2/2-way valve, externally controlled, normally closed by spring operation with pilot valve

Circuit Function B

2/2-way valve, externally controlled, normally opened by spring, operation with pilot valve
