

The complete full bore magmeter Type 8054/8055, which consists of a magnetic sensor fitting Type S054 or S055 connected to an electronics Type SE56 (blind in compact version or with display in compact or remote version) is designed for applications with liquids with a minimum conductivity of 5 $\mu\text{S}/\text{cm}$.

Combined with a valve as the actuating element, the complete flowmeter Type 8054/8055 can control high-precision dosing operations and flow measurements in potable water treatment and waste water treatment.

Electromagnetic Flowmeter, full bore - General purpose version

- Combination of sensor fitting S054 or S055 and electronics SE56
- Continuous measurement or Batch Control
- Version without (S054) or with (S055) flanges
- For water treatment and general purpose applications

General data - S054/S055 sensor fitting

Compatibility	SE56 electronics (see corresponding data sheet)
Materials	
Body	Carbon steel painted [or stainless steel 304 or 316]*
Electrodes (3 in standard)	Stainless steel 316L [or Hastelloy C, Titanium, Tantalum, Platinum-rhodium]*
Lining	PP (max. 16 bar), ebonite [or PTFE]*
Seal	FKM or EPDM* (with PP lining) [or without gasket (with Ebonite or PTFE lining)]
Electrical connection	2 cable glands PG9

Ordering information for complete flowmeter Type 8054/8055

A complete flowmeter Type 8054 respectively 8055 consists of a sensor fitting S054 or S055 and an electronics SE56.

The following information is necessary for the selection of a complete flowmeter:

- **item no.** of the sensor fitting **Type S054 or S055** (see Ordering Chart on page 6)
- **item no.** of the electronics **Type SE56** (see corresponding data sheet or Ordering chart on page 7)

Design and operating principle

The sensor fitting Type S054 or S055 consists of a stainless steel pipe section internally lined with insulating material. Two electrodes mounted opposite to each other on the internal surface of the tube generate an electrical signal. The coils generating the magnetic field are placed outside the pipe. The signal generated by the sensor fitting S054 or S055 must be amplified and processed by an electronics (SE56) which outputs an electrical signal proportional to the fluid flow velocity respectively to the flow rate.

Faraday's induction law is the basis for this magnetic flow measurement.

Installation

Avoid the functioning with the pipe partially filled.

During flowmeter operation the pipe must be completely full.

Avoid the installation near curves or hydraulic accessories.

Observe the upstream and downstream distances.

The sensor fitting can be installed into either horizontal or vertical pipes. Mount the sensor fitting in the below as correct indicated ways to obtain an accurate flow measurement.

The suitable pipe size is selected using the diagram Flow/Velocity/DN (see diagram to the right).
The flow sensor fitting is not designed for gas flow measurement.

Flow/Velocity/DN diagram

Example:

- Flow: 10 m³/h
- Ideal flow velocity: 2... 3 m/s
- For these specifications, the diagram indicates a pipe size of DN40
