

General purpose high pressure radar level measuring device

- For level measurement up to 30 m
- 4... 20 mA/Hart - 2 wires
- Adjustable via Display, key operation or PC-Tool with DTM
- ATEX approvals Ex

Type 8137 can be combined with...

Type 8793

Process controller

Type 2103

Diaphragm valve

Type 8802-GD

Element control valve system

Type 8644

Valve islands

PLC

The Type 8137 is a non-contact radar level measuring device for continuous level measurement.

The unit is available in two versions:

- with thread and horn antenna (\varnothing 40 mm) particularly suitable for use in small tanks and process vessels for measurement of almost any product.

- with flange and horn antenna (\varnothing 40 or 75 mm) particularly suitable for use in storage tanks and process vessels for measurement of media such as solvent, hydrocarbons and fuels under extremely difficult process conditions.

General data

Materials

Housing / Cover	PBT, Stainless steel 316L / PC
Seal ring / Ground terminal	NBR / Stainless steel 316Ti/316L (1.4571/1.4435)
Wetted parts	
Process connection	Stainless steel 316L
Seal (threaded version)	Klingsil C-4400
Antenna	Stainless steel 316L
Antenna cone	PTFE (TFM 1600 PTFE)
Seal (antenna system)	FKM

Display*

LCD in full dot matrix (option)

Process connection

Thread G1½" or NPT1½"
Flange DN50 or 100 DIN2501, 2" or 4" ANSI B16.5

Electrical connection

Cable glands M20 x 1.5

Measuring value

Distance between process connection and product surface

Min. dielectric figure

$\epsilon_r > 1.6$

Dead zone

50 mm

Measuring range

0.05 to 10 m (recommended - antenna with \varnothing 40 mm)
0.05 to 30 m (recommended - antenna with \varnothing 75 mm)

Process temperature

-40 to +130°C (-40 to 266°F)

Vessel pressure

-1 to 40 bar (-14.51 to 580.4 PSI) (-100 to 4000 kPa)
or according to flange rules

Vibration resistance

Mechanical vibrations with 4 g and 5... 100 Hz

Temperature coefficient

0.03%/10K (Average temperature coefficient of the zero signal - temperature error)

Resolution

max. 1 mm

Frequency

K-band (26 GHz technology)

Interval

approx. 1 s

Beam angle at 3 dB

22° (antenna with \varnothing 40 mm)
10° (antenna with \varnothing 75 mm)

Adjustment time

> 1 s (dependent on the parameter adjustment)

Accuracy

± 2 mm (see diagram)

* to be ordered separately

Electrical data	
Operating voltage	14 - 36 V DC or 14 - 30 V DC (Ex ia instrument)
Permissible residual ripple	< 100 Hz: $U_{ss} < 1$ V 100 Hz... 10 kHz: $U_{ss} < 10$ mV
Output signal	4... 20 mA/HART
Resolution	1.6 μ A
Fault signal	current output unchanged 20.5 mA, 22 mA or < 3.6 mA (selectable)
Current limitation	22 mA
Load	see load diagram
Damping (63% of the input variable)	0... 999 s, adjustable
Environment	
Ambient temperature	-40 to +80°C (-40 to 176°F) (operation and storage)
Relative humidity	80% max; without condensation
Standards and approvals	
Protection	IP66/IP67 with M20 x 1.5 gland mounted and tightened
Overvoltage category	III
Protection class	II
Standard	
EMC	EN61326
Security	EN61010-1
NAMUR	NE 21; NE 43
Approvals	ATEX ¹⁾ : EN60079-0; EN60079-11; EN60079-26
Specifications Ex	
⊕ - Protection	Categories 1/2G or 2G
⊕ - Certification	Ex ia IIC T6
Conformity specifications¹⁾	
Operating voltage U_i	30 V
Short circuit rating I_i	131 mA
Power limitation P_i	983 mW
Ambient temperature	-40 to +55°C (-40 to 131°F) (dependent on categories)
Internal capacity C_i	negligible
Internal inductivity L_i	negligible

1) homologation certificate PTB 08 ATEX 2002X

Load diagram

Target applications

In storage tanks

Lacquers, paints and thinners are stored in tanks up to 15 m high. These substances require no pre-treatment and are fed directly to incinerators via smaller day tanks. Agitators inside the tanks prevent fibrous materials and colour pigments from clumping and settling on the bottom. The 8137 radar measuring device is the ideal solution here for level measurement. The radar measurement is unaffected by ambient conditions, such as strong vapour emission of the waste, and delivers accurate measuring results even when the agitators are in motion.

In the digester, in the decanter

The bauxite is decomposed by adding thinned caustic soda and mixing it thoroughly with the bauxite in the digester. To achieve an optimal utilisation of the process, it is important to regulate the filling level in a fixed range. Contactless radar technology has all the right prerequisites for this measurement task. The 8137 radar measuring device records the current level and passes it on to the control system. Even the rotating agitator blades do not disrupt the measurement. Also in the decanter, which immediately follows the digester, the 8137 reliably performs its service in temperatures up to 200°C and pressures up to 40 bar. The steam atmosphere prevailing in the vessel does not affect the measurement either.

Principle of operation

The radar measuring device consists of an electronic housing, a process connection element the antenna and a sensor. The antenna emits short radar pulses with a duration of approximate 1 ns to the medium. These pulses are reflected by the medium surface and received by the antenna as echoes. Radar waves travel at the speed of light. The running time of the radar pulses from emission to reception is proportional to the distance and hence to the level. The determined level is converted into an output signal and transmitted as a measured value.

The measuring device can be adjusted with:

- the display/configuration module
- the suitable Bürkert DTM in conjunction with adjustment software according to the FDT/DTM standard, e.g. PACTware™ and PC
- a HART handheld

The entered parameters are generally saved in the measuring device Type 8137. Optionally, parameters may also be uploaded and downloaded with the display/configuration module or save in a file by using PACTware™/DTM

▶ Set up with display/configuration module

The display/configuration module can be inserted into the measuring device and removed again at any time. It is not necessary to interrupt the power supply. The measuring device is adjusted via the four keys of the display/configuration module

▶ Set up with PACTware™/DTM and HART communication

The measuring device can be operated thanks to PACTware™, via HART communication. An interface adapter is necessary for the adjustment with PACTware™. For the setup of the Type 8137, the DTM in the actual version must be used. The basic version of DTM incl. PACTware™ is available as a free-of-charge download from the Internet at www.burkert.com.

Connecting the PC via HART

1. Measuring device 8137
2. HART-USB Modem
3. Resistance 250 Ohms

Necessary components:

- Measuring device 8137
- PC with PACTware™ and suitable Bürkert DTM
- HART-USB Modem
- Resistance approx. 250 Ohms
- Power supply unit
