Process controller

Universal process controller eCONTROL on a valve

The Type 8177 is a non-contact ultrasonic level measuring device designed for continuous level measurement in open or closed vessels.

The unit is suitable for liquids, but also for solids, in virtually all industries, particularly in water and waste water management.

Materials	
Housing	PBT, Stainless steel 316L (1.4435)
Cover	PC
Seal ring	NBR
Ground terminal	Stainless steel 316Ti/316L (1.4571/1.4435)
Wetted parts	DVDE
Process connection, transducer	PVDF
Process seal	EPDM
Display	LCD in full dot matrix
Process connection	Thread G2" or NPT2"
Max. torque mounting boss	25 Nm
Electrical connection	Cable glands M20 x 1.5
Measuring value	Distance between lower edge of the transducer and
	product surface
Dead zone	0.4 m
Measuring range	0.4 to 8 m (for liquids)
	0.4 to 3.5 m (for solids)
Process temperature	-40 to +80°C (-40 to 176°F)
Vessel pressure	-0.2 to 2 bar (-2.9 to 29.02 PSI) (-20 to 200 kPa)
Vibration resistance	Mechanical vibrations with 4 g and 5 100 Hz
Temperature coefficient	0.06%/10K (Average temperature coefficient of the zero signal -
	temperature error)
Resolution	max. 1 mm
Frequency	55 kHZ
Interval	> 2 s (dependent on the parameter adjustment)
Beam angle at 3 dB	11°
Adjustment time ¹⁾	> 3 s (dependent on the parameter adjustment)
Accuracy	< 0.2% or ± 4 mm (see diagram)

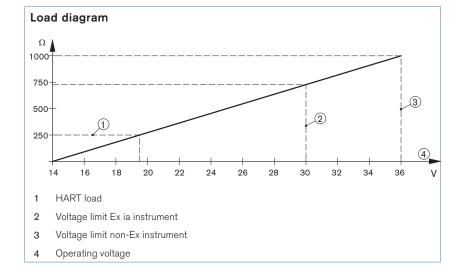

Accuracy diagram

Time to output the correct level (with max. 10% deviation) after a sudden level change.

Electrical data				
Operating voltage	14 - 36 V DC or 14 - 30 V DC (Ex ia instrument)			
Permissible residual ripple	< 100 Hz: Uss < 1 V 100 Hz 10 kHz: Uss < 10 mV			
Output signal	4 20 mA/HART			
Resolution	1.6 μA			
Fault signal	current output unchanged; 20.5 mA; 22 mA < 3.6 mA (adjustable)			
Current limitation	22 mA			
Load	see load diagram			
Damping (63% of the input variable)	0 999 s, adjustable			
Environment				
Ambient temperature with display, adjustment elements Relative humidity	-20 to +70°C (-4 to 158°F) (operation and storage) Max. 75% (operation), max. 85% (storage); without condensatio			
Standards and approvals				
Protection	IP66/IP67 with M20 x 1.5 gland mounted and tightened			
Overvoltage category	III			
Protection class	II

Target applications

Continuous level measuring for fluids and solids

Distance measuring

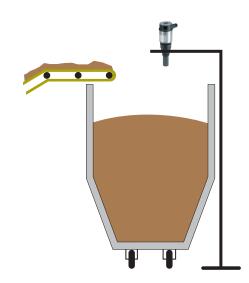

Open basins

A typical application for the 8177 ultrasonic measuring device is level measurement in open basins. Products such as rain water or sewage water, i.e. with impurities. Here is where the advantages of non-contact measurement with the 8177 come into their own: simple and maintenance-free. The degree of pollution of water or an accumulation of mud in the basin is not important, because the 8177 measures the surface.

Sludge container

In sewage treatment plants, the accumulated sludge is dewatered and transported via conveyor belts to containers. The 8177 measuring device measures the filling of the container. An empty container can thus be readied in good time before the max. level is reached.

Principle of operation

The transducer of the ultrasonic measuring device emits short ultrasonic pulses, at 55 kHz to the measured product. These pulses are reflected by the medium surface and received by the transducer as echoes. The running time of the ultrasonic pulses from emission to reception is proportional to the distance and hence to the level. An integrated temperature sensor detects the temperature in the vessel and compensates the influence of temperature on the signal running time. The determined level is converted into an output signal and transmitted as a measured value.

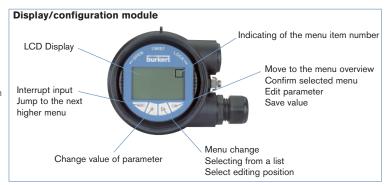

The measuring device is adjusted with the display/configuration module.

The entered parameters are generally saved in the measuring device Type 8177. Optionally, parameters may also be uploaded and downloaded with the display/configuration module.

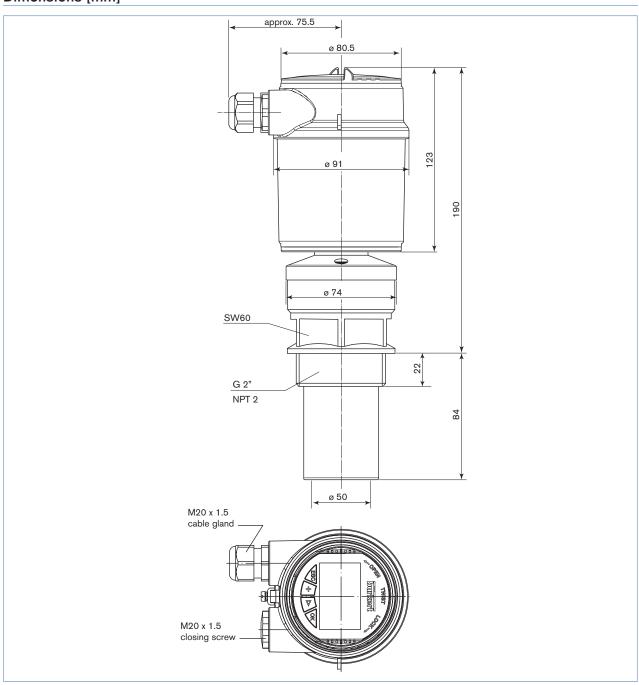

Set up with display/configuration module

The display/configuration module can be inserted into the measuring device and removed again at any time. It is not necessary to interrupt the power supply. The measuring device is adjusted via the four keys of the display/configuration module.
