

Series 31 compact cylinders

Double and single-acting, double-acting non-rotating, magnetic
 ø12, 16, 20, 25 mm
 ø 32, 40, 50, 63, 80, 100 mm UNITOP

- » Compact design
- » Wide range of models available
- » Standard magnetic
- » High temperature (double-acting and non magnetic)

The compact dimensions allow Series 31 single and double-acting magnetic cylinders to be installed within confined spaces. These cylinders are suitable for use with feet, brackets.

These cylinders are available in 10 different bore sizes from ø 12 to ø 100. The guides are inserted in the external profile parallel to the sliding axis on three sides. These guides are used to locate the switches that sense the piston position. The construction design of these cylinders provides excellent axis stability. They are available either with a male or female thread.

These cylinders can be supplied in W version for high temperatures (140°C). This last version is not magnetic.

GENERAL DATA

Type of construction	compact profile
Operation	single and double-acting
Materials	AL body and end-blocks - rolled stainless steel AISI 303 rod - AL piston rod PU seals or FKM seals for high temperatures (140°C)
Brackets	flange, feet, trunnion
Stroke min - max	Series 31R, 31M and 31F: ø12÷25 = 1÷200mm, ø32 ÷ 63 = 1÷300 mm, ø80÷100 = 1÷400mm The min. stroke for the use of sensors is 10 mm. Single-acting = 5÷25 mm (see the table of standard strokes)
Operating temperature	0°C + 80°C (with dry air - 20°C)
Operating pressure	1 ÷ 10 bar (double-acting); 2 ÷ 10 bar (single-acting)
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Speed	10 ÷ 1000 mm/sec (without load)

STANDARD STROKES

■ = Double-acting female, male

✗ = Non-rotating

● = Single-acting female, male

PNEUMATIC SYMBOLS

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

Swivel ball joint Mod. GA
(cyl. Mod. 31M)90° swivel combination
for trunnion Mod. I

Rear trunnion Mod. C

Rod fork end Mod. G
(cyl. Mod. 31M)Piston rod lock nut
Mod. U (cyl. Mod. 31M)90° swivel combin.
for fem. trunnion Mod. ZC

Rear trunnion Mod. L

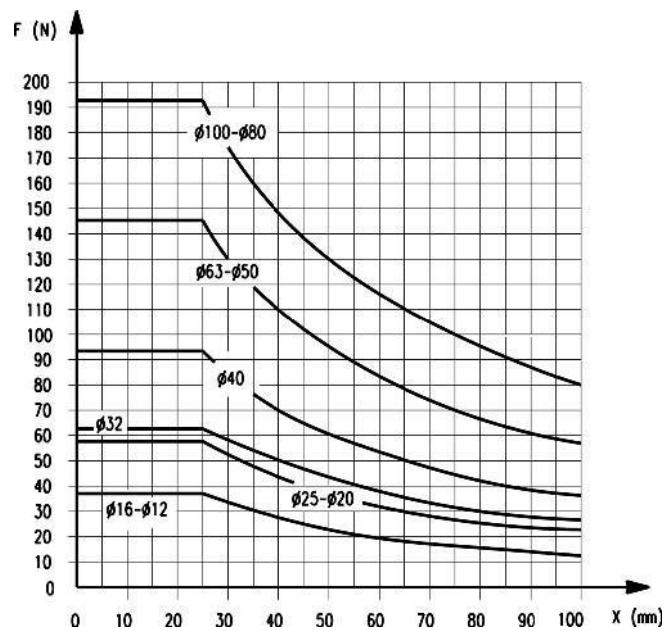

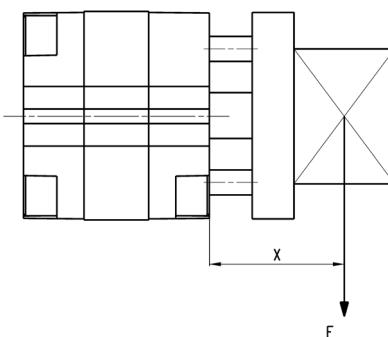

Rear and front flange
Mod. D

Foot mount Mod. B

Coupling piece
Mod. GKFSelf aligning rod
Mod. GKPiston rod socket joint
Mod. GY (cyl. Mod. 31M)

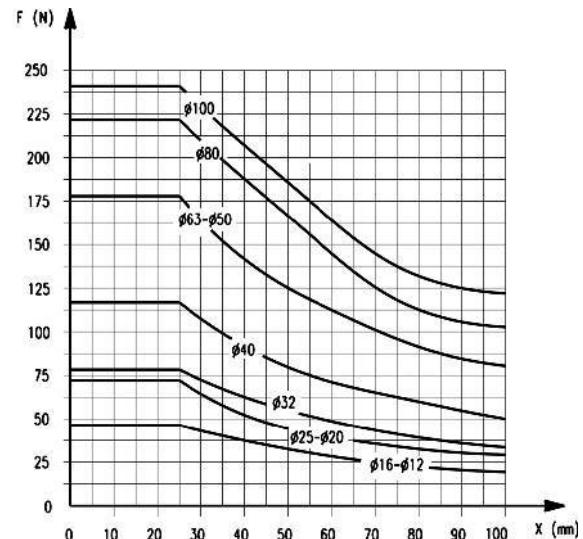

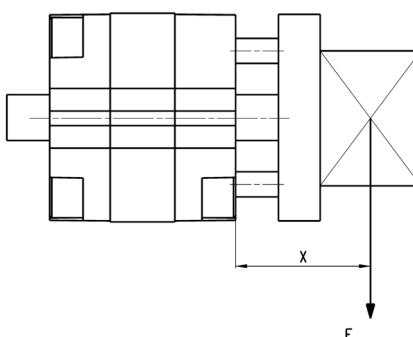

All accessories are supplied separately.

ANTI-ROTATION - Transversal load dependant on projection

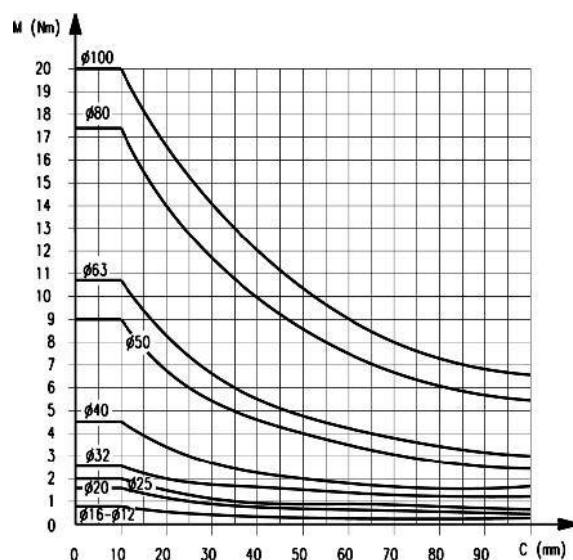

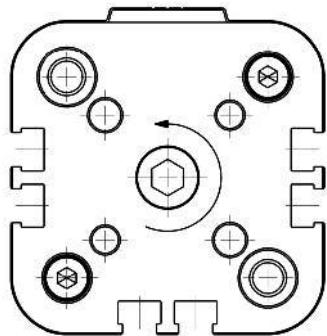

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

ANTI-ROTATION THROUGH-ROD - Transversal load dependant on projection

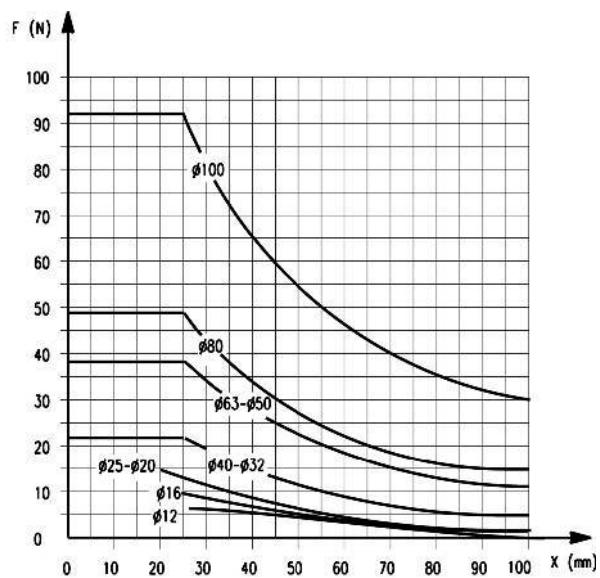

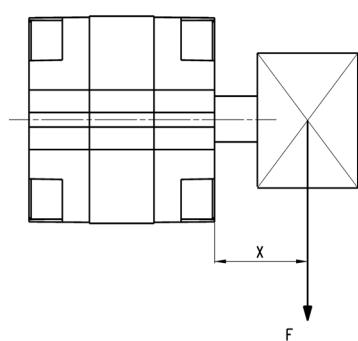

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

TORQUE MOMENT - dependant on stroke C

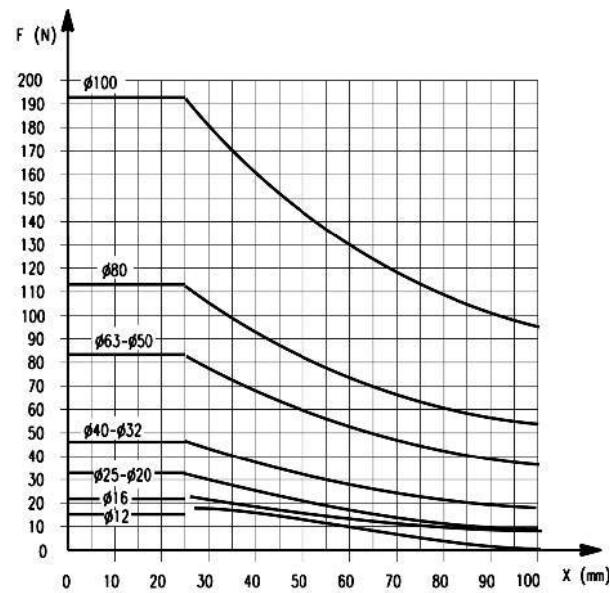

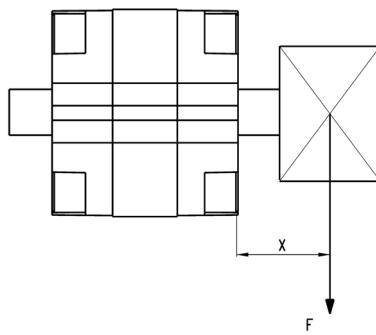

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

TRANSVERSAL LOAD - dependant on projection

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

TRANSVERSAL LOAD THROUGH-ROD - dependant on projection

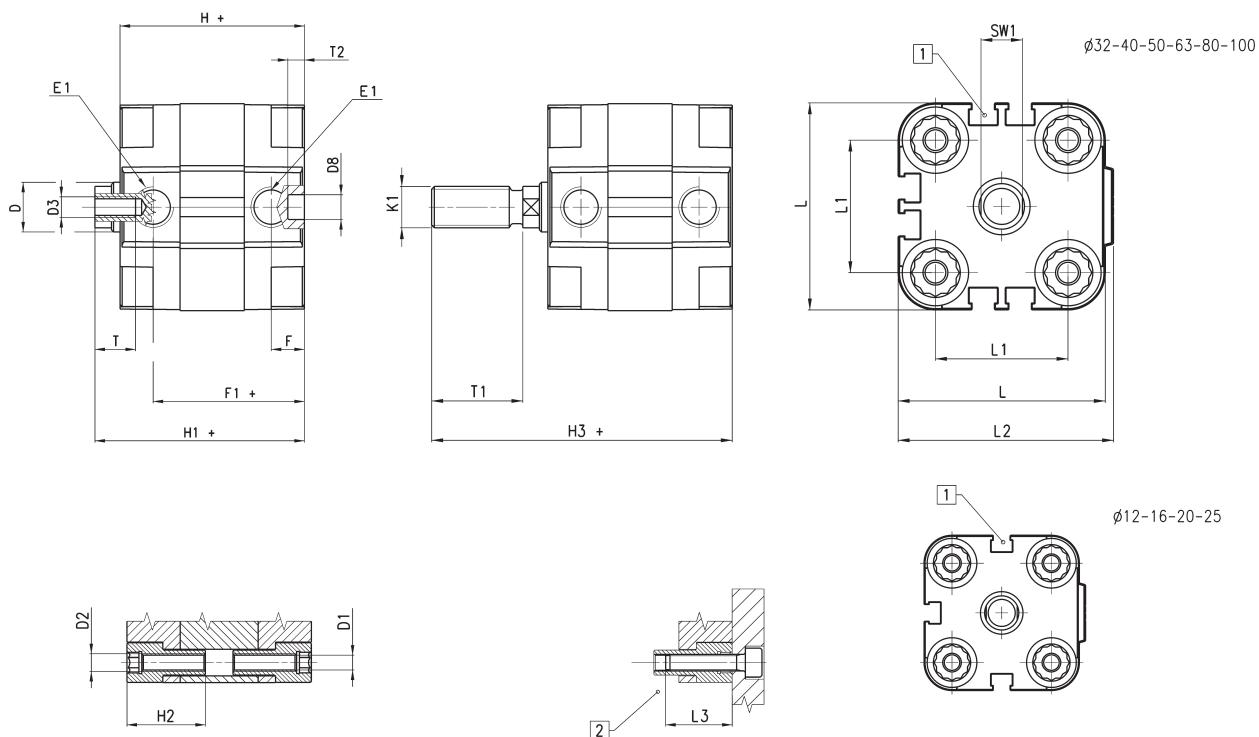

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

Compact magnetic cylinders Mod. 31F and 31M

1 = Groove for sensor CST
2 = Keep to the minimum screwing depth.
+ = add the stroke
